

# Handbooks of natural philosophy & astronomy Volume 1; third course, meteorology - astronomy

This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1858 Excerpt: ...of the visual rays included within the angle formed by the rays drawn to the edges of the two rings, and the effective opening will be found by subtracting the visual angle subtended by the thickness of the outer ring from the visual angle subtended by the space between the rings; and since the obliquity of the visual rays bounding the former gradually diminishes, in approaching the equator, while the obliquity of the visual rays bounding the latter gradually increases, it is evident that the visual angle subtended by the thickness of the outer ring continually increasing will, at some certain latitude, become equal to the visual angle subtended by the space between the rings; and at that latitude accordingly, as well as at all inferior latitudes, the thickness of the outer ring will altogether intercept the opening, and no zone of the heavens will be visible through it. I have found by calculation, that if 250 miles be admitted as the major limit of the rings, all view of the heavens through the opening will be intercepted at latitudes below 8; and if the probable minor limit of 150 miles be assumed, all view will be intercepted at and below the latitude of 5. 2862. Solar eclipses by the rings.--The principles upon which solar eclipses by the rings in each latitude are calculated are, therefore, easily understood. By comparing the parallel of declination of the sun at any time with the parallels of declination of the points where each of the edges of each of the rings meets the horizon and the meridian, the conditions under which it will intersect the edges severally will be determined, and hence it will appear that a most curious and interesting body of solar phenomena, not anticipated in any of the works in which

the uranography of Saturn has be...
